Requirement ID	Description	Story Points	Priority	Sprint No.
1	A core expression parser handling basic arithmetic, scientific functions, and parenthetical evaluation.	1	1	1
2	A basic arbitrary-precision calculation engine ensuring accurate decimal results without standard floating-point rounding errors.	1	2	1
3	A simple persistent session history allowing users to recall past inputs and outputs via a standard "Ans" key.	1	3	1
4	A standard conversion module handling the most common length, weight, volume, temperature, and basic currency units.	2	4	1
5	A clean, user-friendly UI layout. Non-cluttered, intuitive, and allowing users to easily locate important menus.	2	5	1
6	A 2D graphing module, able to plot single variable equations on a canvas viewer with controls such as pan and zoom.	2	6	1
7	A calculation mode switcher that allows users to choose between basic, scientific, financial, and conversion modes. Current input/session history should be preserved.	1	7	1
8	A category filter system that allows the user to search for functions by category.	1	8	1
9	A standard financial calculation module covering compound interest, loan payments, etc.	2	9	2
10	A breakdown view that shows the calculation steps, including the formula definitions when needed.	2	10	2
11	An input checker with helpful explanations for issues like missing parentheses or division by zero.	1	11	2
12	Undo and redo for expression editing.	1	12	2
13	Number theory tools: prime check, prime factorization, greatest common divisor, and least common multiple.	3	13	2
14	Precision controls for displayed decimal places or significant figures while preserving the full stored value	2	14	2
15	A tolerance calculator that computes minimum and maximum results from measurements with specified tolerances.	2	15	2
16	A statistical calculation module that allows users to calculate mean, median, mode, standard deviation, and variance for a given dataset.	3	16	2
17	A fraction calculator that allows users to perform arithmetic operations with fractions and convert between fractions and decimals.	3	17	2
18	A percentage calculator that allows users to calculate percentage increases, decreases, and differences between values.	2	18	2
19	A graph customization feature that allows users to adjust axis ranges, gridlines, and graph labels.	3	19	2
20	An equation solver that allows users to enter basic algebraic equations and solve for an unknown variable.	5	20	2
21	A favorite systems that lets users save frequently used calculations for quick access.	2	21	2
22	Customization that lets users change colors, labels, and display settings.	2	22	2
23	An export tool that lets users download their calculation history as a text or CSV.	3	23	2
24	An graph comparison view that lets multiple equations be displayed either seperately or overlapping simulatenously.	3	24	2
25	A scenario feature that allows users to save multiple financial calculations and compare results side by side.	3	25	2
26	A programmer mode that allows users to convert numbers between decimal, binary, hex, and use bitwise logic.	2	26	2
27	A matrix tool that allows users to add, mulitply, and find the inverse.	2	27	2
28	A calculus tool that allows users to find the derivatives and definite integrals.	1	28	2
29	Complex number mode that allows users to do standard math using real and imaginary numbers.	1	29	2
30	Find intercept points on a graph for user	2	30	
31	Constants Library (Speed of light, Gravity, etc.)	2	31	
32	Allow users to save graphs as a PNG (the user should be able to export graphs as images by clicking a button).	1	32	
33	Allow for short notes to be added to saved calculations.	1	33	
34	A light/dark mode system that allows the user to toggle between light, dark, and system UI color themes.	1	34	
35	A region-dependent system that correctly displays decimals and commas.	1	35	
36	A right click selection UI menu containing shortcut buttons such as copy and paste.	1	36	
37	A button to toggle the display of thousands separators in large numbers.	1	37	
38	An angle unit toggle button that allows the user to switch between degrees and radians.	1	38	
39	A scientific notation button to toggle the display of very large or small numbers as exponents.	1	39	
				DON'T TOUCH
	TOTAL STORY POINTS	**71**		

An all-in-one calculator app that consolidates basic math, scientific calculations, financial tools, unit conversions, and advanced graphing functionality into a single unified platform. It does not just provide isolated numerical answers; it allows users to plot equations on interactive graphs, track previous calculation history, and instantly switch between different calculation modes based on their exact needs. Users can filter results by specific categories such as algebra, statistics, finance, or trigonometry to get tailored information for each function. Clicking on each calculation mode displays advanced parameters, step-by-step breakdowns, formula definitions, and customizable variables so users can tweak inputs and instantly see updated outputs.
